## THURSDAY 24TH AUGUST 2023

---

120 STUD ANGUS BULLS + 20 STUD HEIFERS  
100 COMMERCIAL ANGUS PTIC FEMALES

# IT'S A SIGN OF BETTER PRODUCTIVITY AND ANIMAL HEALTH

'Immune Ready' is a guideline for the care of sale cattle. It helps protect cattle in the preparation, transport and arrival post sale.

## FOR BUYERS

- It reduces the risk of disease in purchased cattle
- It improves farm biosecurity
- It improves animal health and welfare

## FOR SELLERS

- It prepares your cattle for potential disease challenges
- It allows you to promote and sell premium cattle
- It helps safeguard against disease and improve productivity

Learn more about Immune Ready Guidelines

# SPRING BULL SALE THURSDAY 24<sup>TH</sup> AUGUST 2023

120 STUD ANGUS BULLS + 20 STUD HEIFERS  
100 COMMERCIAL ANGUS PTIC FEMALES

## Welcome to the Gilmandyke Bull and Production Sale for 2023

Welcome to the Gilmandyke Bull and Production Sale for 2023! We are proud to present our 2023 sale draft. These bulls and females are a true representation of the foundation and breeding philosophy that we pride ourselves on and an example of the quality of livestock that we strive to produce within the Gilmandyke program. Globally sourced, locally tested, and commercially proven. As always, our commercial program provides stability and continues to influence the direction we breed within the stud.

2023 will see 120 bulls offered across three age groups: 2-year-old, 18-month-old, and 12-month-old bulls. We have confidence in increasing the number of bulls offered due to the exceptional quality within the sale draft. The bulls on offer have been bred for their commercial relevance to our clients and to us, with the long-term future of the beef industry at the center of all our breeding decisions.

Sire lines included in this year's sale include 55 sons of Dunoon Prime Minister, a proven performer within our commercial herd, as well as Millwillah Krakatoa, Baldrige 38 Special, Gilmandyke Pioneer, Gilmandyke Revolution, Lawson's Rocky, and Sterling Pacific, which are exciting new sires.

The increase in bull numbers has allowed us to address the demand for heifer-safe joining sires. We understand the importance of versatility in bull selection for breeding operations, particularly when it comes to calving ease. In this year's sale draft, we believe there are 70 bulls suitable for joining heifers.

The strength of our cows and the selection of higher-performing sires are evident throughout the catalogue, contributing to the overall quality of the offering. Several bulls in this draft will have semen collected for use within our commercial AI program.

Females have always been a key focus of the Gilmandyke program, and this year is no exception. We have expanded the female offering to include 20 registered stud heifers, which will be sold open and ready to join. This presents a great opportunity for customers to access some of the top cow families we have in production. Additionally, PTIC (Pregnancy Tested In-Calf) heifers from the Gilmandyke commercial program will be offered. These heifers have been selected under the same criteria as our own replacement females and have been backed by decades of careful breeding selection to retain only the best females.

On behalf of the Bateman family and the Gilmandyke team, we look forward to seeing you on sale day.

**Wade Peatman**    **Peter McNamara**  
General Manager    Stud Manager

# REBATES & DISCOUNTS

## 5% Rebate

We are pleased to offer a 5% rebate to all agents who attend with or on behalf of their clients and settle within seven (7) days.

## \$500 Discount

We are pleased to offer a \$500 discount on bull purchase when combined with purchase of female lot.

## FREE Delivery

Gilmandyke Pastoral will deliver Bulls free of charge to the Regional Livestock Exchanges in Yass, Carcoar, Forbes, Dubbo and Tamworth.

EFTPOS: For the convenience of our buyers B&L Livestock will have EFTPOS facilities on the day; accepting Visa and Mastercard.

### ONLINE BIDDING AND LIVESTREAMING

AuctionsPlus will facilitate livestreaming and online bidding on the day. Please register with B&L Livestock and use your AuctionPlus account to access the sale.

# SALE INFORMATION

## Sale Location

Gilmandyke Pastoral Stud is located at "Kangarooobie" 1346 Mitchell Hwy, Orange NSW.

## Inspection

Inspection from 10.00 am on sale day. Inspections at any other time are welcome.

## Refreshments

Morning tea and a light lunch will be available.

## Insurance

It is our recommendation that insurance is taken out on all purchases. Representatives will be available on the day.

## Health

All bulls have been ear notch tested free of Pestivirus (BVDV). They have been vaccinated with 2 doses of Pestiguard, 2 doses 7 in 1 and 2 doses of Vibrovax. AM, NH, CC, CA and DD status is shown in each lot heading. No bulls on offer have had any feet treatment. All sale bulls are vet inspected for structure and breeding soundness.

## Guarantee

Gilmandyke Pastoral guarantees the structural soundness and fertility of the bulls for a period of six months after the sale. If a bull is proven to be infertile or unable to serve (providing not related to injury or disease) Gilmandyke will credit purchase price of bull less salvage value.

Whilst Gilmandyke has carried out every precaution with the working abilities of the bulls, we are here to help if there is an issue with your purchase. Please contact us immediately if there is a problem so we can attempt to rectify.

## Multiple Bull Purchases

The bulls in this year's sale have been run in three separate groups to minimise injury, if planning on making multiple purchases please discuss with Gilmandyke staff to find out if bulls are from same mob.

## Delivery

Gilmandyke Pastoral will deliver bulls free of charge to the Regional Livestock Exchanges in Yass, Carcoar, Forbes, Dubbo and Tamworth.

## Bull Transfer

Bulls will incur no charge for transfer. Please provide herd prefix on registration.

## Safety

We select animals with traits of good temperament and ease of handling. However, all animals can be unpredictable, particularly if stressed.

Visitors enter pens at their own risk.

- Children are not permitted in the pens
- Do not overcrowd the pens
- Keep movement and noise to a minimum
- Be aware of your surroundings

## Semen Rights

Gilmandyke Pastoral retains the right to collect up to 1500 straws of semen from all bulls sold. Gilmandyke Pastoral will collect the semen by agreement with the bull owner at Gilmandyke Pastoral's cost. This will be for Gilmandyke Pastoral use only.

## Disclaimer

## JOIN THE GILMANDYKE PROGRAM

GILMANDYKE EXCLUSIVE S133

**The Gilmandyke commercial program fundamentally under pins every facet of our operating business. Gilmandyke is a large-scale program, run with the finest attention to detail and scrutiny of our breeding females. It is these management tactics that help us in reaching our goal of breeding 'functional females'.**

From day one, a replacement heifer must be born easily, grow quickly, maintain good structure and temperament. She must conceive in a 6-week joining period, maintain her pregnancy, calve easily, maintain her body condition score while milking her first calf, mature into a productive cow, rebreed successfully and finally wean a healthy calf. All to complete the cycle for several years, this is what we describe as a 'functional female'.

Our 2023 line up of commercial heifers are outstanding. They have grown and developed nicely into a productive female over the last 12 months. A percentage of the lots are PTIC via artificial insemination to the \$55,000 top priced bull from 2022, Gilmandyke Exclusive S133. These heifers are due to begin calving on the 25/9/23. Gilmandyke Exclusive S133 was selected because of his calving ease to fast growth pattern, structural soundness, functionality and pedigree performance. He is currently delivering results for two stud programs in Queensland. The remainder of the heifer lots are PTIC naturally to walking heifer bulls that have been retained for the Gilmandyke stud and commercial programs.

I've had one eye on T46 for the last few months contemplating to keep him, however there is only so many PM sons I can keep for stud work. He carries a stylish outlook with so much correctness and a great growth pattern. His dam Eutesca K0276 is a proven performer with her son selling for \$30,000 in last year's bull sale.

T32 is the first of the Quarterback Q011, Bonny N281 crosses to sell in the draft, and he encapsulates the performance we are seeing throughout these progenies. The genetic make up of this bull and his flush brothers have worked incredibly well together. T32 has been the highest growth and ADG bull in this age group from day dot. He has always impressed me with his presence, volume and muscle expression, not to mention how docile and functional he is.

Right from the get-go T109 has been on the radar. He has always had incredible muscle expression, softness and he has been a real doer. The balance this bull possess and how he transfers it from his front end, through his shoulders, over his spine and hip and through his lower leg is impressive. He is structurally sound, docile and has a royal pedigree. Eutesca P331 will make her way into the donor pen this year on the back of T109 and her calf this Autumn. Stud sire potential.

T103 has been growing in leaps and bounds and I think he has more to do. He has a great hind quarter, arguably the best in the sale. He is sound, docile and long bodied making him a hard bull to ignore. I look forward to seeing him on sale day, I think he'll be an eye catcher.

Note: White patch on his offside shoulder is only a birthmark and should not be heritable to his progeny. I can visibly remember the day I tagged this calf when he was born, he was a smart looking calf that immediately had style and presence. Overall, this bull is put together very well from his shoulder, over his spine and into his lower hind quarter. He has a good muscle pattern and I think that will continue to improve as he grows and develops into a mature bull.

A great display of length, frame and soundness in this bull. This bull's huge growth and carcase EBV's become an asset when producing heavy weaners and steers. Eloxa J0146 is a cow that has a name for herself around here for continually producing powerful progeny and that can certainly be seen in this bull. J0146 currently has 9 daughters retained in the stud program.

A bigger, growthy bull with extra frame and extension. He offers a nice muscle pattern through his hind quarter all while maintaining good functioning movement. The combination of Prime Minister P758 and Chisum 6175 in the pedigree continues to complement each other well and this bull is a great representation of that combination.

A larger framed Emillesque P85, Prime Minister P758 son. Again, he encompasses the maternal focus of this genetic cross. The genetic package that this bull offers has been successful in our program. Full flush siblings have sold as yearlings in 2022 and a full brother has been retained for stud duties. Suitable for use over heifers.

This is a genetic outcome that has attracted the interest of those touring the herd in recent times. The attraction being the functionality of the bulls, a free moving adequate framed animal with strong muscling and doing ability. I think T291 will be a slightly larger framed bull for being a 38 Special son, however I like to see that. Semen will be retained for in herd use. Suitable for use over heifers.

A good example of what Sterling Pacific is achieving here. I love the body mass and sire presence that he adds to the program. Edette K180 has been a great donor and will continue to contribute to the herd. A well balanced deep bodied bull that combines maternal performance with growth, docility and structural soundness.

A great cross that we knew was bound to work. Eutesca J0161 has been a selection in the donor pen that we have been able to fine tune her breeding type so when Sterling Pacific became available we thought it was a no brainer that we utilise that breeding opportunity. I like his thickness from his base right throughout his topline and tied in neatly with depth of muscling.

Purchaser:..... \$.....

To breed females and breed them well, I think genetics and performance get the job done every time. This bull is a combination of a sire that has made an incredible maternal impact on our herd and a dam that continues to hit the nail on the head and produce productive breeding females. This bull has a slightly later maturity pattern however is so suited to that replacement female breeding objective.

This Beast mode son would be one of the more powerful bulls in the draft and rightly so. He is in the top 1% of the breed for growth traits and carcass weight, he combines this extreme performance with superb docility which makes him a hard to fault bull. His Dam Eva K0044 is a cow that I rate highly, she has multiple daughters being retained in the stud herd and I am very excited about their potential.

This young bull has grown out well. He has an attractive body type with great muscling and overall, so well balanced. The heritage genetics in the pedigree of this bull is one to note. The Narrangullen Bonny female line combined with Dream Y301 offers great potential for future production of sound females. Suitable for use over heifers.

A moderate female with one hell of a body, she has so much thickness and depth of muscling. We are retaining a full flush brother for stud duties and offering 4 full flush siblings in the yearling bulls. Her dam Dream N314 is a crowd favourite at Gilmandyke that has been such a successful donor. Her contribution to our program is only just beginning and the impact she has made so far is incredible. A Dream N314 son topped the 2022 bull sale at \$55 000.

This cross of Sterling Pacific and Emillesque M401 was the standout line of heifers during the weaning process earlier this year. She is developing into a lovely big female, that's well made right from her neck extension and shoulder set, through to her hip and pin combining that with a nicely balanced data set and a highly rated pedigree, T281 has plenty to offer.

I have so much admiration for the Edette K0180 cow in this herd, the D78, Prime Minister P758 combination continues to produce quality females and this heifer is no exception. I love the femininity, functionality and balance that this heifer offers. Coupling that with a great package of growth and performance and the result is high quality.

I love this heifer for her overall extension and frame, I think she is well made and offers so much breeding potential. She descends from a Flower cow we purchased in 2010. The Meadows Flower E85, who is a daughter of the famous Millah Murrah Flower S110. This cross with Prime Minister P758 adds an extra level of performance and functionality that combines beautifully with the maternal attributes of the flower cow family

The Emillesque M414, Prime Minister P758 cross is one that works so well. She has a full flush sibling in the yearling bulls and the two of them come into their own quite nicely. She displays beautiful thickness through her hip while maintaining that femininity that matron cows display. Emillesque M414 is a prolific donor at Gilmandyke with a royal status, the female line is well represented in this sale draft, and we are very proud of the progeny that comes from this family.

The Eva line shines through again with breeding females and the potential that this heifer brings to the equation is exciting. I first included Eva L0272 in the donor pen not long after I first saw her purely on her depth of body, soundness and her maternal ability. This heifer totals a nice balanced set of EBVs with the functionality and performance of Prime Minister P758 and Eva L0272.

A moderate young female yet packing plenty of punch into her type. Strong boned and thick set with great volume all while maintaining female functionality. She encapsulates these traits so well which offers greater versatility for her breeding potential. I must mention the Emillesque Q75 female line, all four of the Emillesque females in the extended pedigree of this heifer have been high profile donor cows in the Gilmandyke herd. Worth their weight in gold.

A lovely natural calf off Emillesque P168. I have been able to watch this young heifer develop closely over the last 10 months as her dam was an inclusion in the donor pen last season. I have been continually impressed by her do ability; she would be the youngest female in this line yet leaves no performance behind. The Musgrave Stunner, Klooney cross repeats itself successfully in this genetic package. A moderate framed heifer, with plenty of power and thickness while maintaining plenty of neck extension. A true representation of her dam and the quality we think she has.

Another of the younger females in this sale line up, yet a larger framed heifer with some growth and development yet to do. She has functionality and is so structurally sound and with that comes longevity. I think she has the potential to be a foundational female.

T304 is a Eutesca descending from one of our greatest and most influential foundational cows in Eutesca W131. The genetic crosses we have used to achieve the outcome of this heifer have continually impressed us through out our herd, with multiple flush siblings too Eutesca P307 breeding impressive individuals that are also offered in the sale line up. Functionality and longevity come to mind with this female.

# AuctionsPlus

## How to Register and Bid on AuctionsPlus

- 1 Go to [www.auctionsplus.com.au](http://www.auctionsplus.com.au) to register at least 48 hours before the sale.
- 2 Select "Sign Up" in the top right hand corner.
- 3 Fill out your name, mobile number, email address and create a password.
- 4 Go to your emails and confirm the account.
- 5 Return to AuctionsPlus and log in.
- 6 Select "Dashboard" and then select "Request Approval to Buy".
- 7 Fill in buyer details and once completed go back to Dashboard.
- 8 Complete buyer induction module (approx. 30 minutes).
- 9 AuctionsPlus will email you to let you know that your account has been approved.
- 10 Log in on sale day and connect to auction.
- 11 Bid using the two-step process – unlock the bid button and bid at that price.
- 12 If you are successful, the selling agent will contact you post sale to organise delivery and payment.

For more information please contact us on:

Phone: (02) 9262 4222

# BRINGING YOUR NEW BULL HOME

# BRINGING YOUR NEW BULL HOME

WHEN PURCHASING A BULL, CARE AND HANDLING AFTER THE SALE CAN BE AS IMPORTANT AS THE PURCHASE ITSELF.  
LOOKING AFTER YOUR BULL WELL DURING THE INITIAL STAGES OF HIS WORKING LIFE MAY ENSURE LONGEVITY  
AND SUCCESS WITHIN YOUR BREEDING HERD.

Consult with your veterinarian and draw up a policy for treating bulls on arrival and then annually. Bulls should be drenched to prevent introducing worms and, if necessary, should be treated for lice.

Bulls are a large investment for breeding herds and they have a major effect on herd fertility. A little time and attention to make sure they are fit, free from disease and actively working is well worthwhile.

Plan to give follow-up vaccinations 4–6 weeks later. Leave the bulls in the yards for the next day or two on feed and water to allow them to settle down with other stock for company. A bull's behaviour will decide how quickly he can be moved out to paddocks.

## NORTHERN AUSTRALIA

Although the Angus breed originated in a cooler climate, they can adapt to subtropical regions with many straight-bred and cross bred producers finding success in Northern Australia. Some of the following information may also be helpful for new bulls located in more temperate climates.

## MATING NEW YOUNG BULLS

Newly purchased young bulls should not be placed with older herd bulls for multiple-sire joining. The older, dominant bull will not allow the young bulls to work, and will knock them around while keeping them away from the cows.

## ADAPTATION

They key to Northern success for Angus is that cattle introduced from the Southern regions of Australia be allowed to adapt to their new environment before commencing their working life. If possible, a break of 3 months is advisable before you set your bull to work.

Use new bulls in either single-sire groups or with young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

## PURCHASE IN COOLER MONTHS

Ensure your bulls are in good condition before they do commence their working life. The cooler months are an ideal time to purchase and introduce Angus cattle, allowing them plenty of time to acclimatise.

When the young bulls are working, inspect them regularly and closely.

## MATING NEW YOUNG BULLS

Older working bulls also need special care and attention before mating starts. They should be tested or checked every year for physical soundness, testicle tone, and serving capacity or ability.

## CHANGE OF FEED SOURCE

When inducting Angus cattle into your herd consider their source of feed. Have you taken an animal which has been supplemented on grain straight to a dry pasture? Animals should be gradually changed over to their new feed to ensure they do not lose condition. This may involve using supplements which could include dry lick/urea blocks.

All bulls to be used must be free-moving, active and in good condition. Working bulls may need supplementary feeding before the joining season to bring up condition.

## MANAGING CATTLE TICKS

For ticky areas, bulls should be vaccinated prior to transport and given another booster afterwards. Remember males are more susceptible to ticks than females.

## DURING MATING

- Check bulls at least twice each week for the first 2 months. Get up close to them and watch each bull walk; check for swellings around the sheath and for lameness.
- Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately.
- Rotate bulls in single-sire groups to make sure that any bull infertility is covered. Single-sire joining works well but it has risks. The bulls must be checked regularly and carefully, or the bulls should be rotated every one or two cycles.

Information is provided by the Department of Primary Industries NSW. For further information visit the DPI web site: [www.dpi.nsw.gov.au](http://www.dpi.nsw.gov.au). or [www.angusaustralia.com.au](http://www.angusaustralia.com.au). Further reading - Buying Angus Bulls

## PURCHASE

Temperament is an important characteristic when selecting a bull. Selecting a bull that may be flighty or aggressive will make life difficult for you each time he is handled. Note which bulls continually push to the centre of a mob, run around, or are unreasonably nervous, aggressive or excited.

At the sale, note any changes of temperament by individual bulls. Some bulls that are quiet in the yard or paddock may not like the pressure and noise of the auction and become excited. Others that were excited beforehand get much worse in the sale ring and can really perform. Use the yard or paddock behaviour as a guide, rather than the temperament shown in the ring.

## DELIVERY

When transporting your new bull insurance against loss in transit, accidental loss of use, or infertility, is sometimes provided by vendors. Where it is not, it is worth considering. After purchase tips:

- When purchasing, ask which health treatments he has received.
- Treat and handle him quietly at all times - no dogs, no buzzers. Talk to him and give him time and room to make up his mind.
- With more than one bull from different origins, you must be able to separate them on the truck.
- Make sure that the truck floor is covered to prevent bulls from slipping. Sand, sawdust or a floor grid will prevent bulls from being damaged by going down in transit.
- If you can arrange it, put a few quiet cows or steers on the truck with the bull. Let them down into a yard with the bulls for a while before loading and after unloading.
- Unload and reload during the trip as little as possible. If necessary, rest with water and feed. Treat bulls kindly your impatience or nervousness is easily transmitted to an animal unfamiliar to you and unsure of his environment.

## IF YOU USE A PROFESSIONAL CARRIER:

- Make sure the carrier knows which bulls can be mixed together.

- Discuss with the carrier, resting procedures for long trips, expected delivery time, truck condition and quiet handling.
- Give ear tag and brand numbers to the carrier and make sure you have the carrier's phone number.
- If buying bulls from interstate, organise any necessary health tests before leaving and work out if any other requirements must be met before cattle can come into another State.

When buying bulls from far away, you may often have to fit in with other delivery arrangements to reduce cost. You should make it clear how you want your bulls handled.

## ARRIVAL

When the bull or bulls arrive home, unload them at the yards into a group of house cows, steers or herd cows. Never jump them from the back of a truck directly into a paddock—it may be the last time you see them. Bulls from different origins should be put into separate yards with other cattle for company.

Provide hay and water, then leave them alone until the next morning .

The next day, bulls should receive routine health treatments. If they have not been treated before, all bulls should be vaccinated with:

- 5-in-1 vaccine;
- vibriosis vaccine;
- leptospirosis vaccine (if in areas like the Hunter where leptospirosis exists);
- three-day sickness vaccine (if in areas where this sickness can cause problems).

Give particular attention to preventing new bulls bringing vibriosis into a herd. Vibriosis, a sexually transmitted disease, causes infertility and abortions and is most commonly introduced to a clean herd by an infected bull. These bulls show no signs of the illness. Vaccinated bulls are free from vibriosis, so vaccinating bulls against the disease should be a routine practice.

Vaccination involves two injections, 4–6 weeks apart, at the time of introduction, and then a booster shot every year. Complete the vaccinations 4 weeks before joining.
